

## Achievements and Open Issues in the Determination of Fragmentation Functions

*Friday, 1 June 2018 18:10 (20 minutes)*

I review recent progress in the determination of the collinear fragmentation functions (FFs). I focus on the role of new data, improved theory and increased methodological sophistication in recent global QCD fits of light charged hadron FFs. I outline issues that are still open, and I discuss possible ways to assess the interplay between FFs and parton distribution functions (PDFs) in semi-inclusive observables.
