

TA and TALE - Results and Plans

Monday, 9 September 2013 16:00 (20 minutes)

The Telescope Array (TA) project has been accumulating data on ultra-high energy cosmic rays for over four years. Results on the spectrum, composition and anisotropy of this radiation will be presented. The current status of the Telescope Array Low Energy Extension (TALE), designed to study the termination of the galactic cosmic ray spectrum and the nature of the “ankle” in the cosmic ray spectrum, will be presented. An update on the recently fully operational bi-static radar cosmic ray detector TARA will also be presented.

Primary author: Prof. SOKOLSKY, Pierre (University of Utah)

Presenter: Prof. SOKOLSKY, Pierre (University of Utah)

Session Classification: High Energy Astrophysics I

Track Classification: High-Energy Astrophysics (includes all cosmic ray physics)
