TAUP 2013

First data from CUORE-0

Wednesday, 11 September 2013 16:00 (20 minutes)

"CUORE-0 is a neutrinoless double beta decay $(0\nu\beta\beta)$ experiment built to test and demonstrate the performances of the upcoming CUORE experiment. Composed of 52 $^{\rm nat}$ TeO $_2$ bolometers of 750 g each, it is expected to reach a sensitivity to the $0\nu\beta\beta$ half-life of 130 Te around $5\cdot 10^{24}$ y. CUORE-0 started to take data in April. CUORE-0 data are here presented for the first time, with an update of the expected scientific reach."
